Poster Abstracts

Table of contents

Theme 1: Rust Race Analysis & Surveillance

01. Genetic Diversity of Wheat Stem Rust Pathogen (Puccinia graminis f. sp. tritici) Isolates from Ethiopia as Revealed by Microsatellites
   B Admassu, W Friedt, F Ordon ................................................................. 229

02. Wheat Rusts Survey and Virulence of Puccinia graminis in Ethiopia
   G Woldeab, B Girma, B Hundie, A Badebo, B Kassa, N Bacha, M Degefu, S Baze, F Handoro,
   B Bitew, S Tmesgen, T Husein ........................................................................ 229

03. Puccinia striiformis f. sp. tritici Race Changes in the United States
   X Chen, L Penman, A Wan, P Cheng ........................................................... 230

04. Population Structure of Wheat Disease Pathogens Causing Epiphytotics in Southern Russia
   G Volkova, V Nadykta, L Anpilogova, L Kovalenco, E Sinyak .................... 230

05. Variability in Responses to Puccinia graminis pers. f. sp. tritici on Different Host Plants
   ES Skolotneva, SN Lekomtseva ........................................................................ 231

06. Occurrence of Wheat Rusts in Turkey During the 2008 Growing Season
   Z Mert, F Dusunceli, K Akan, S Albusan, M Aydogdu, A Karakaya ..................... 232

07. Evolution of the Leaf Rust Pathogen on Durum Wheat in Northwestern Mexico

08. Wheat Rusts in India - Pathogenic Changes
   M Prashar, SC Bardwaj, SK Jain, YP Sharma, Jag Shoran .................................. 233

09. Effective Rust Resistance Genes in Wheat under Moroccan Conditions
   A Ramdani, M Jilbene, N Nsarellah, SM Udupa ........................................... 233

10. Survey of Wheat Diseases in Morocco During the 2007-08 Growing Season
    A Ramdani .................................................................................................. 234

11. Diverse Stem Rust Races Found In A Single Field In Washington, USA
    M Rouse, S Stoxen, L Szabo, X Chen, Y Jin .............................................. 234

12. Status of Wheat Rusts in Uzbekistan
    Z Ziyaev, SK Baboev, Kh Turakulov, A Morgounov, Z Khalikulov, RC Sharma ............ 235

Theme 2: New Sources of Rust Resistance for Wheat

13. A Survey of Genetic Variation for Adult Plant Stem Rust Resistance Among the A.E. Watkins
    Collection of Hexaploid and Tetraploid Wheat Genotypes
    HS Bariana, UK Bansal, H Miah, AKk Toor, F Hussain, RF Park .......................... 237

14. Sources of Resistance to Stem Rust Race Ug99 in Wild Tetraploid Wheat Accessions
    E Alwan, FC Ogbonnyaya, B Ayele, K Nazari, D Worku, O Abdalla, SH Hakim, G Bedada ............................... 237

15. SSR-Genotyping of Triticum aestivum x T. timopheevii Introgression Lines and Mapping of
    Genes for Leaf Rust Resistance
    IN Leonova, EB Budashkina, MS Roder, EA Salina ........................................ 238

16. Association Mapping of Loci Conferring Resistance to Race TTKSK in Cultivated and
    Wild Barley Germplasm.
    BJ Steffenson, J Roy, H Zhao, Y Jin ................................................................ 238

17. R-Genes Rpg4 and Rpg5 are Required for Resistance to Stem Rust Race TTKSK in Barley
    R Brueggeman, B Steffenson, Y Jin, A Kleinhaus ............................................ 239
18. Slow Rusting Resistance to Stripe Rust and Leaf Rust in Indian Wheat Genotypes
Under Artificially Inoculated Conditions
MS Saharan, AK Sharma .................................................................................................................. 239

19. Identification of Chromosomal Regions Determining Leaf Rust, Yellow Rust and Stem
Rust Resistances in CIMMYT Germplasm Through Association Mapping
SA Herrera-Foessel, RP Singh, J CRoss, J Burgeno, S Bhavani, J Huerta-Espino, S Dreisigacker,
PK Singh, D Singh.............................................................................................................................. 240

20. Resistance to Wheat Stem Rust in Triticale (X Triticosecale)
PD Olivera, S Gale, L Wanschura, M Rouse, Y Jin ........................................................................... 240

CW Hiebert, BD Mc Callum, GF Marais, DG Humphreys ................................................................... 241

22. Mapping Of New Sources of Resistance to Puccinia graminis f. sp. triticici Race Ug99
S Bhavani, RP Singh, J Huerta-Espino, D Singh, Y Jin ...................................................................... 241

23. Allosyndetic Recombinants of the Ae. peregrina-Derived Lr59 Translocation in Common Wheat
GF Marais, L Kotze, A Eksteen ........................................................................................................... 242

24. Stem Rust Resistance in Triticum monococcum Germplasm
M Rouse, B Steffenson, Y Jin ................................................................................................................ 242

25. Toropi, a Source of Leaf Rust Resistance Genes in Wheat
SB Rosa, B McCallum, A Brule-Babel .................................................................................................. 243

26. Sources of Resistance to the Ecuadorian Yellow Rust Population in Bread Wheat Germplasm of CIMMYT
J Ochoa, E Falconi .................................................................................................................................. 243

27. Attempts to Remove Gametocidal Genes Co-Transferred With Rust Resistance
from Aegilops speltoides.
GF Marais, TE Bekker, A Eksteen, B McCallum, T Fetch, AS Marais ......................................................... 244

28. New Sources of TTKSK Resistance Derived from Thinopyrum and Aegilops Species
SS Xu, Y Jin ........................................................................................................................................... 244

29. Haplotyping New Sources for Stem Rust Resistance in Wheat Using Available Markers
LX Yu, ME Sorrells .................................................................................................................................. 245

30. Molecular and Pathological Characterization of Slow Rusting Against Leaf Rust in
Common Wheat
S Kumar, P Sareen, L Prasad, U Kumar, RP Singh, AK Joshi .................................................................. 245

31. Quantitative Trait Loci for High-Temperature Adult-Plant Resistance to Stripe Rust And
Molecular Mechanisms of the Durable Type of Resistance
X Chen, T Coram, X Huang, F Lin, J Zhao, D Santra, A Carter, K Kidwell, K Campbell, Z Kang .................. 246

32. Quantitative Trait Loci for Adult-Plant Resistance to Stripe Rust in a Recombinant Inbred
Line Population Derived from a Stephens x Platte Cross
M Dolores Vazquez, A Heesacker, C James Peterson, X Chen, K Ammar, C Mundt, JM Leonard,
O Riera-Lizarazu .................................................................................................................................. 246

33. Genetic Analysis of Wheat Leaf Rust Resistance Associated with the Solid Stem Trait
BD McCallum, FR Clarke, RE Knox, RM De Pauw ............................................................................. 247

34. A Major QTL for Leaf Rust Resistance, Widely Exploited in Durum Wheat Breeding,
Maps on Chromosome 7BL
M Maccarelli, P Mantovani, MC Sanguineti, A Demontis, A Massi, K Ammar, J Kolmer,
JH Czembor, A Breiman, R Tuberosa .................................................................................................. 247

35. Screening of International Wheat Germplasm for Multiple Disease Resistances in Morocco
A Ramdani, M Jlibene, N Nsarellah, SM Udupa .................................................................................... 248

36. Introgression of Resistance to Wheat Stem Rust Race TTKSK from Sharon Goatgrass into Wheat
E Millet, PD Olivera, BJ Steffenson ....................................................................................................... 248
37. Stem Rust Resistance in Aegilops tauschii Germplasm  
M Rouse, E Olsen, M Pumphrey, BJ Steffenson, Y Jin ................................................................. 249

38. Resistance to Wheat Stem Rust in Spelt Wheat (Triticum aestivum ssp. spelta)  
PD Olivera, S Gale, L Wanschura, M Rouse, Y Jin ........................................................................ 249

39. Progress and Prospects in Discovery and Use of Novel Sources of Stem Rust Resistance  
Y Jin, M Rouse, PD Olivera, BJ Steffenson .................................................................................. 250

40. Wheat-Stripe Rust Interactions Involving ‘Moro’ Resistance  
DA Gaudet, X Wang, B Puchalski, F Leggett, A Kuzyk, A Laroche ........................................ 250

41. Effect of Silencing Gene Yr10 for Stripe Rust Resistance in Moro Wheat  
W Liu, A Laroche, Z-S Kang, DA Gaudet .................................................................................. 251

42. Cloning And Characterization of Avr1 Gene from Puccinia triticina  
A Pacheco, H Zhang, DB Hays ..................................................................................................... 251

Theme 3: Breeding Rust Resistant Wheat

43. Shortening the Lr62/Yr42 Translocation in Common Wheat  
GF Marais, AS Marais, A Eksteen, ZA Pretorius ........................................................................ 253

44. Resistance to Stem Rust Race Ug99 in the Canadian Spring Wheat Cultivar ‘Peace’  
G Humphreys, T Fetch, CW Hiebert, B McCallum ..................................................................... 253

45. Molecular Mapping of Rust Resistance Genes and Marker-Assisted Breeding in Wheat  
M Cakir, F Drake-Brockman, M Shankar, H Golzar, D Kollehn, R McLean, H Bariana, R Wilson, I Barclay, C Moore, H Kuchel, M Jones, R Loughman ............................................. 254

46. The Multi-State Rust Screening Nursery at Castroville, Texas, U.S.A.  
AMH Ibrahim, J Rudd, A Klett, A Fritz ....................................................................................... 254

47. Evaluation in Kenya of Global Diversity in Winter Wheat for Resistance to Stem Rust  
A Morgounov, M Keser, B Akin, P Njau, R Wanyera, D Singh .................................................... 255

M Csosz, L Purnhauser, A Mesterhazi, M Tor, J Matuz, Z Ketersz, L Cseuz, B Beke, L Bona, M Papp ................................................................. 255

49. Breeding Leaf Rust Resistant Wheat Varieties in Martonvasar, Hungary  
G Vida, M Gal, I Karsai, Z Bedo, O Veisz .................................................................................. 256

50. Combined Resistance to the Most Important Wheat Diseases in the Czech Republic  
A Hanzalova, J Chrpova ............................................................................................................. 256

51. Screening Wheat Germplasm for Resistance to Stem Rust in Georgia  
Z Sikharulidze, D Bedoshvili, L Mgeladze, K Natsarishvili, N Chkhutiashvili ................................ 256

52. Wheat Breeding for Durable Rust Resistance in Pakistan  
A ur-Rehman, M Hussain, F Muhammad, M Hussain, N Ahman, M Arif Khan, Waseem Sabir, M Ijaz Tabassum, MM Iqbal, M Younas ......................................................................................... 257

53. Breeding Rust Resistant Wheat Varieties in Tajikistan  
M Ramhatov, H Muninjanov, M Otambekova, B Khusenov, Z Eshova, A Ibragimov, A Yorov, A Hede, A Morgounov ................................................................................................................. 258

54. Identification of Stem Rust Resistance Germplasm in Kazakhstan  
AM Kokhmetova, S Rsaliev, M Maten ........................................................................................... 258

55. Employing Male Sterility Mediated Marker Assisted Recurrent Mass Selection in a Pre-Breeding Strategy for Accumulating Disease Resistance Genes  
S de Groot, KW Pakendorf, WC Botes .......................................................................................... 259

56. Pyramiding Slow Rusting Genes for Durable Resistance to Leaf Rust in Durum Wheat  
SA Herrera-Foessel, RP Singh, J Huerta-Espin, K Ammar ................................................................ 259
57. Stacking Leaf Rust Resistance Genes in Wheat Breeding Populations Using Telocentric Chromosomes
   CW Hiebert, JB Thomas, BD McCallum ........................................................................................................... 260

58. A Systemic Approach to Germplasm Development: a Simple Way to Reach a Complex Goal
   F Langevin, A Comeau, VR Caetano, J Gilbert, H Voldeng, M Savard, Y Dion, S Rioux, F Eudes,
   RA Martin, S Haber, D Somers .......................................................................................................................... 260

59. Addressing Old Challenges to a Sustainable Durum Wheat Production in Tunisia While Preparing to Face New Threats: Development and Deployment of Cultivars with Combined Resistance to Septoria tritici, Leaf Rust and Stem Rust Ug99+
   MS Gharbi, K Ammar, A Yahyaoui .................................................................................................................... 261

Theme 4: Plant Protection and Seed Delivery

60. Initiatives and Progress Through Participatory Varietal Selection in Promoting Race Ug99 Resistant Wheat Lines on the Eastern Gangetic Plains
   Ak Joshi, R Chand, B Arun, VK Mishra, G Ortiz-Ferrara, HJ Braun, RP Singh ....................................................... 263
Theme 4:
Plant Protection and Seed Delivery

60. Initiatives and Progress Through Participatory Varietal Selection in Promoting Race Ug99 Resistant Wheat Lines on the Eastern Gangetic Plains

AK Joshi¹,², R Chand³, B Arun¹, VK Mishra¹, G Ortiz Ferrara³, HJ Braun⁴, RP Singh⁴

The threat of stem rust epidemics caused by *Puccinia graminis* f. sp. *tritici* race Ug99 to the wheat crop on the northeastern Gangetic Plains is real. The warm and humid conditions experienced in the region are conducive to rapid disease development. Identification and breeding Ug99-resistant varieties are therefore major priorities for the region. Because of the underdeveloped seed industry and small farm sizes, various strategies are needed to disseminate resistant cultivars in a relatively short time before Ug99 reaches South Asia. Although the Indian wheat program, in collaboration with CIMMYT and KARI, has identified some existing resistant wheat varieties. The areas they occupy must increase to about 5% of the total wheat area to ensure replacement of current popular varieties if necessary. In addition to national evaluation trials including advanced selections from all breeding programs, there are also farmers’ participatory selection approaches in several districts in the eastern Gangetic Plains, whereby new superior lines and newly released varieties are disseminated to farmers. The objective is to enhance genetic diversity and to provide more options to farmers. The inclusion of Ug99-resistant high yielding lines distributed during last three years (2006-2009) is enabling farmers and the region to prepare for future challenges. Some of the new lines included in this fast-track participatory approach have shown significant yield superiority over the highly popular variety HUW234, and better resistance or tolerance to other biotic and abiotic stresses that occur in the region. Moreover, the incomes of farmers, who choose to sell grain of their preferred varieties as seed, have also increased. Our results show that participatory variety selection of diverse promising lines and released varieties enables them to be disseminated to farmers in a way that enhances productivity and income simultaneously.
